

Global Parts & Classification

GTKonnect Global Parts helps streamline Global parts management & classification across your organization.

Organization

Manage parts trade and compliance content, classify for multiple countries, manage the classification process with dashboards/reports and workflow.

Integration

Connect applications such as Oracle, SAP, Dynamics, etc. to automatically exchange feeds of the master data or load via a flat file, CSV or excel formats. Export data to other tools, brokers, and partners managing your global classifications.

Global Trade Content

Manage global trade reference data such as Port codes, State Codes, Country Codes, Currency codes, conversion factors, INCO terms, Units of Measures etc.

Catalog & Workflow

Manage your global SKUs including sets/kits, by cataloging them using advanced features to add categories and attributes on the fly and assign values to them - makes it easy to classify and update.

Assign classification tasks to teams, get notifications, review, verify, validate and track tasks.

US Customs Trade Content

Connect to US customs to query, validate and maintain master data related to HTS, duty rates, special programs, ADD/CVD, OGA and other indicators.
