

Post Entry Audit

Do you really know what your broker is doing or what your client's broker is doing? With GTK Post Entry - we collect the data, we run your rules and you review the results. No more staring at entries and documents - run a data drive program.

Collect Data

Manage data via upload - each night have the 7501 data sent to the Post Entry Module. The tool picks it up and loads it. Not ready for the IT spend - load it via Excel or CSV.

The fastest easiest way is to have the broker feed the 7501 data to an FTP folder where we pick it up and load.

Setup The Rules & Audit

You set the rules; CI, parts, SPI/FTA, HTS, CO, Chapter, ADD/CVD, OGA/PGA, value, duty amount etc. Make it complicated or simple your choice. We build your dashboard to reflect your rules.

Visibility

Reporting, data analysis, and images all in a single location accessible within seconds anywhere - anytime! Track events, activities, your specific statuses, and liquidations. Create PSC's and send them to your broker for corrections. You didn't do the entry but you have the control.

We find it amazing that even with apps, document retention tools, share drives, and other tools most of the brokerage files are still pushed around via paper. Move to a data-driven electronic environment where you have your information and documents at your fingertips. GTKonnect BASE + Configurable Solutions Customize to your business model.
