

Reconciliation

Flag Your Entries

With changes to ACE entries must be flagged individually for the specific Recon; value, classification, 9802, and FTA.

Collect Data From Brokers

If Not Using GtK Imports There are multiple ways to add the recon data to GTK; flat file, CSV, Excel, EDI - if using multiple brokers any combination of the above can be applied.

Upload Your Entries

And Remove Errors GtK Recon allows both file-by-file and aggregate filing. Depending on the criteria checked when uploading GTK will validate uploaded data for correctness. If errors occur user can download fix and reload.

File Your Recon

When you have completed your verification and validation file your Recon. GTK tracks your filing and provide customs responses.

Simple, Easy, And Efficient

GTK Recon is a simple way to support your reconciliation entry processing.
